NEW QUESTION: 1

Deviations from the baseline should be investigated and

-
- A. Encouraged
 - B. Revealed
 - C. Documented

D. Enforced

Answer: C

Explanation:

Explanation/Reference:

Explanation:

All deviations from the baseline should be documented, including details of the investigation and outcome.

We do not enforce or encourage deviations. Presumably, we would already be aware of the deviation, so "revealing" is not a reasonable answer.

NEW QUESTION: 2

A user has setup a custom application which generates a number in decimals. The user wants to track that number and setup the alarm whenever the number is above a certain limit. The application is sending the data to CloudWatch at regular intervals for this purpose. Which of the below mentioned statements is not true with respect to the above scenario?

- A.** The user has to supply the timezone with each data point
- B.** The user can create a file in the JSON format with the metric name and value and supply it to CloudWatch
- C.** The user can get the aggregate data of the numbers generated over a minute and send it to CloudWatch
- D.** CloudWatch will not truncate the number until it has an exponent larger than 126 (i.e. (1×10^{126}))

Related Posts126.

Answer: A

NEW QUESTION: 3

Exhibit:

Which statement about inter-AS MPLS VPN Option_B is false?

- A.** The ASBR cannot be used as a PE simultaneously and a CE cannot be connected to an ASBR.
- B.** The undo policy vpn-target command must be configured in the VPN4 address family view of the BGP neighbor of the ASBR to prevent routes from being filtered automatically.
- C.** When ASBRs are directly connected, packets transmitted on the VPN between them have only one label.
- D.** When ASBRs are directly connected, VPN traffic can be forwarder between them only after MPLS is enabled on the interfaces.

Answer: A

NEW QUESTION: 4

Which variable in an EEM applet is set when you use the sync

yes option?

- A. `$_exit_status`
- B. `$_result`
- C. `$_string_result`
- D. `$_cli_result`

Answer: A

Explanation:

Explanation/Reference:

Explanation:

The CLI event detector screens CLI commands for a regular expression match. When a match is found, an event is published. The match logic is performed on the fully expanded CLI command after the command is successfully parsed and before it is executed. The CLI event detector supports three publish modes: Synchronous publishing of CLI events--The CLI command is not executed until the EEM policy exits, and the EEM policy can control whether the command is executed. The read/write variable,

`_exit_status`, allows you to set the exit status at policy exit for policies triggered from synchronous events.

If `_exit_status` is 0, the command is skipped, if `_exit_status` is 1, the command is run.
