Our 304 exam questions are high-effective with a high pass rate as 98% to 100%, You can free download BIG-IP APM Specialist exam demo questions to have a try before you purchase 304 complete dumps.

Latest BIG-IP APM Specialist pass review & 304 getfreedumps study materials

Passing out the F5 exam with the help of pdf dumps and testing engine software isn't a tough job, Passing 304 certification can help you realize your dreams.

You can trust in our quality of the 304 exam questions and you can try it by free downloading the demos, You will get acquainted with the interface, once you will try the free demo.

So they are great 304 test guide with high approbation, Candidates master our questions and answers of the valid 304 preparation materials, one exam will just take you 15-30 hours to prepare.

Our company committed all versions of 304 practice materials attached with free update service, Learning the F5 304 dumps pdf questions and answers is enough and will help you to get prepared for the 304 BIG-IP APM Specialist Exam effectively but to get 100% result in your BIG-IP APM Specialist Exam, you will have to walk an extra mile.

In the intensely competitive society, it is really **Real 304 Braindumps** necessary for you to take part in the examination and get the related certification for all your worth (304 exam guide materials), since the certification is one of the most powerful proofs which can show how professional you are.

#### **NEW QUESTION: 1**

##### **Answer:**

Explanation:

A,D

#### **NEW QUESTION: 2**

Which three control plane subinterfaces are available when implementing Cisco IOS

Control Plane Protection? (Choose three.)

- A. host
- B. fast-cache
- C. CEF-exception
- D. CPU
- E. management
- F. transit

**Answer: A,C,F**

Explanation:

Host subinterface: This interface receives all control plane IP

traffic that is directly destined for one of the router interfaces (physical and loopback). Examples of control plane host IP traffic include tunnel termination traffic; management traffic; and routing protocols such as SSH, SNMP, internal BGP (iBGP), and EIGRP. All host traffic terminates on and is processed by the router. Transit subinterface: This subinterface receives all control plane IP traffic that is software switched by the route processor. This traffic consists of packets that are not directly destined to the router itself but rather are traffic traversing through the router. Nonterminating tunnels handled by the router are an example of this type of control plane traffic. Control Plane Protection allows specific aggregate policing of all traffic received at this subinterface. CEF-exception subinterface: This control plane subinterface receives all traffic that is either redirected as a result of a configured input feature in the CEF packet forwarding path for process switching or directly enqueued in the control plane input queue by the interface driver (that is, ARP, external BGP (eBGP), OSPF, LDP, Layer 2 keepalives, and all non-IP host traffic). Control Plane Protection allows specific aggregate policing of this type of control plane traffic.

### **NEW QUESTION: 3**

Select and Place:

#### **Answer:**

Explanation:

Explanation:

Box 1: Run the Stop-SpDistributedCacheServiceInstance-Graceful Windows PowerShell command.

Box 2: Run the Set-CacheHostConfig Windows PowerShell cmdlet.

Box 3: In Central Administration, starts the Distributed Cache service on CACHE1.

Note:

\*stop-SpDistributedCacheServiceInstance-Graceful

Stops an instance of the distributed cache service on a local server. Use the Stop-

SPDistributedCacheServiceInstance cmdlet to stop an instance of the distributed cache service on a local server.

Execution of this cmdlet moves cached items to another server to preserve them. If you stop the distributed

service before you stop each instance, cached items are lost. To prevent cached items from being lost, use

the Graceful parameter.

\*Set-CacheHostConfig

Updates the configuration settings for a Cache host to the specified values

\*Change the memory allocation of the Distributed Cache Use this procedure to reconfigure the memory allocation of the cache size of the Distributed Cache service. Where:

Reference: Stop-SPDistributedCacheServiceInstance

Reference: Manage the Distributed Cache service in SharePoint Server 2013
