NEW QUESTION: 1
Implementing baselines on systems would take an enormous amount of time and resources if the staff had to apply them to each server, and over time, it would be almost impossible to keep all the systems in sync on an ongoing basis.
Which of the following is NOT a package that can be used for implementing and maintaining baselines across an enterprise?
A. Chef
B. Puppet
C. GitHub
D. SCCM

Answer: C
Explanation:
GitHub is a software development platform that serves as a code
repository and versioning system. It is solely used for
software development and would not be appropriate for applying
baselines to systems.
Puppet is an open-source configuration management tool that
runs on many platforms and can be used to apply and maintain
baselines. The Software Center Configuration Manager (SCCM) was
developed by Microsoft for managing systems across large groups
of servers. Chef is also a system for maintaining large groups
of systems throughout an enterprise.

NEW QUESTION: 2
Which type of sniffing technique is generally referred as MiTM
attack?
