NEW QUESTION: 1

A. var fs = File.ReadAllLines(Filename);
B. var fs = File.Open(Filename, FileMode.Open, FileAccess.Read, FileShare. ReadWrite);
C. var fs = File.ReadAllBytes(Filename);
D. var fs = File.Open(Filename, FileMode.OpenOrCreate, FileAccess.Read, FileShare.ReadWrite);
E. var fs = File.Open(Filename, FileMode.OpenOrCreate, FileAccess.Read, FileShare.Write);
Answer: D
Explanation:
FileMode.OpenOrCreate - Specifies that the operating system should open a file if it exists; otherwise, a new file should be created. If the file is opened with FileAccess.Read, FileIOPermissionAccess.Read permission is required. If the file

access is FileAccess.Write, FileIOPermissionAccess.Write
permission is required. If the file is opened with
FileAccess.ReadWrite, both FileIOPermissionAccess.Read and
FileIOPermissionAccess.Write permissions are required.
http://msdn.microsoft.com/en-us/library/system.io.
filemode.aspx
FileShare.ReadWrite - Allows subsequent opening of the file for
reading or writing.If this flag is not specified, any request
to open the file for reading or writing (by this process or
another process) will fail until the file is closed.However,
even if this flag is specified, additional permissions might
still be needed to access the file.

NEW QUESTION: 3
A developer created a Visualforce page with a custom controller
to show a list of accounts. The page uses the
<apex:SelecList> component, with a variable called
"selection", to show the valid values for Account.Type.
The page uses an <apex:pageBlockTable> component to
display the list of accounts, where the iteration variable is
"acct". The developer wants to ensure that when a user selects
a type on the <apex : selectList> component, only
accounts with that type are shown on the page. What should the
developer do to accomplish this?
A. Use the onChange event to update the list of accounts in the
controller when the value changes, and then re-render the
pageBlockTable.
B. Create a component for each option and use a variable with
hide parameter on the element.
C. Add the Rendered={!Acct.type==selection} attribute to the
pageBlockTable component
D. Create multiple lists in the controller that represent the

relevant accounts for each account type when the page loads, then reference the correct one dynamically on the pageBlockTable.
Answer: A

NEW QUESTION: 4
Refer to the exhibit. The output that is shown is generated at a switch. Which three statements are true?
(Choose three.)

A. All ports will be in a state of discarding, learning, or forwarding.
B. All interfaces that are shown are on shared media.
C. This switch must be the root bridge for all VLANs on this switch.
D. Thirty VLANs have been configured on this switch.
E. The bridge priority is lower than the default value for spanning tree.
F. All designated ports are in a forwarding state.
Answer: A,E,F
Explanation:
Explanation/Reference:
Explanation:
From the output, we see that all ports are in Designated role (forwarding state) -> A and E are correct.
The command "show spanning-tree vlan 30 only shows us information about VLAN 30. We don't know how many VLAN exists in this switch -> B is not correct.
The bridge priority of this switch is 24606 which is lower than the default value bridge priority 32768 -> C is correct.
All three interfaces on this switch have the connection type "p2p", which means Point-to-point environment
-not a shared media >; D is not correct.
The only thing we can specify is this switch is the root bridge for VLAN 3o but we cannot guarantee it is also the root bridge for other VLANs -> F is not correct.
