As long as you have problem on our 5V0-11.21 exam questions, you can contact us at any time.

NEW QUESTION: 1

Which of the following privacy regulation advocates de-identification of personal information?

- A. IT Act of India
- B. Australia's ANPP
- C. Canada's PIPEDA
- D. EU Data Protection Directive

Answer: D

NEW QUESTION: 2

Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series.

Information and details provided in a question apply only to that question.

You are a database administrator for an e-commerce company that runs an online store. The company has the databases described in the following table.

Product prices are updated and are stored in a table named Products on DB1. The Products table is deleted and refreshed each night from MDS by using a Microsoft SQL Server Integration Services (SSIS) package. None of the data sources are sorted. You need to update the SSIS package to add current prices to the Products table.

What should you use?

- A. Merge transformation
- B. Balanced Data Distributor transformation
- C. Sequential container
- D. MERGE statement
- E. Union All transformation
- F. Lookup transformation
- G. Merge Join transformation
- H. Foreach Loop container

Answer: D

Explanation:

Explanation

In the current release of SQL Server Integration Services, the SQL statement in an Execute SQL task can contain a MERGE statement. This MERGE statement enables you to accomplish multiple INSERT, UPDATE, and DELETE operations in a single statement.

References:

<https://docs.microsoft.com/en-us/sql/integration-services/control-flow/merge-in-integration-services-packages>

NEW QUESTION: 3

- A. Snapmirror initialize
- B. Options snapmirror.access on
- C. Snap mirror resync
- D. Options snapmirror.resync on

Answer: A,C

Explanation:

https://library.netapp.com/ecmdocs/ECMP1196979/html/man1/na_snapmirror.1.html snapmirror initialize [-S source] [-k kilobytes] [-s src_snap] [-c create_dest_snap] [-w] destinationStarts an initial transfer over the network. An initial transfer is required before update transfers can take place.

The initialize command must be issued on the destination node. If the destination is a volume, it must be restricted (see na_vol(1) for information on how to examine and restrict volumes). If the destination is a qtree, it must not already exist (see na_qtree(1) for information on how to list qtrees). If a qtree already exists, it must be renamed or removed (using an NFS or CIFS client), or snapmirror initialize to that qtree will not work.

snapmirror resync [-n] [-f] [-S source] [-k kilobytes] [-s src_snap]

[-c create_dest_snap] [-w] destinationResynchronizes a broken-off destination to its former source, putting the destination in the snapmirrored state and making it ready for update transfers. The resync command must be issued on the destination node.
