NEW QUESTION: 1

Refer to the output of the three router commands shown in the exhibit.

A new technician has been told to add a new LAN to the company router. Why has the technician received the error message that is shown following the last command?

- A. The command was entered from the wrong prompt.
- B. The IOS software loaded on the router is outdated.
- C. The interface type does not exist on this router platform.
- D. The interface was already configured.
- E. The router does not support LAN interfaces that use Ethernet.

Answer: C

Explanation:

Explanation

From the output of the "show version" command, we learn that there are only 2

FastEthernet interfaces (2 FastEthernet/IEEE 802.3 interfaces)

and this router does not have any Ethernet interface so an error will occur when we enter the "interface e0" command.

NEW QUESTION: 2

You have a computer that runs Windows 7.

You update the driver for the computer's video card and the computer becomes unresponsive.

You need recover the computer in the minimum amount of time. What should you do?

A. Start the computer from the Windows 7 installation media. Select Repair your computer and then select System Restore.

B. Restart in safe mode and then revert the computer to a previous restore point.

C. Restart in safe mode and then roll back the video card driver.

D. Start the computer from the Windows 7 installation media. Select Repair your computer and then select System Image Recovery.

Answer: C

Explanation:

1035 20222

If you install a driver that causes your computer to become unstable, you should first attempt to roll back the driver. If this does not solve the problem, you can restore system files and settings by performing a system restore to restore the computer to its last system restore point. A system restore returns a computer system to a selected restore point. System restores do not alter user files. Note that a system restore is not the same as a System Image restore.
