NEW QUESTION: 1
Which of the following term in business continuity defines the total amount of time that a business process can be disrupted without causing any unacceptable consequences?
A. WRT
B. MTD
C. RPO
D. RTO
Answer: B
Explanation:
Explanation/Reference:
The sum of RTO and WRT is defined as the Maximum Tolerable Downtime (MTD) which defines the total amount of time that a business process can be disrupted without causing any unacceptable consequences. This value should be defined by the business management team or someone like CTO, CIO or IT manager.
For your exam you should know below information about RPO, RTO,

WRT and MTD:
Stage 1: Business as usual
Business as usual

Image Reference -
http://defaultreasoning.files.wordpress.com/2013/12/bcdr-01.png
At this stage all systems are running production and working
correctly.
Stage 2: Disaster occurs
Disaster Occurs

Image Reference -
http://defaultreasoning.files.wordpress.com/2013/12/bcdr-02.png
On a given point in time, disaster occurs and systems needs to
be recovered. At this point the Recovery Point Objective (RPO)
determines the maximum acceptable amount of data loss measured
in time. For example, the maximum tolerable data loss is 15
minutes.
Stage 3: Recovery
Recovery

Image Reference -
http://defaultreasoning.files.wordpress.com/2013/12/bcdr-03.png
At this stage the system are recovered and back online but not
ready for production yet. The Recovery Time Objective (RTO)
determines the maximum tolerable amount of time needed to bring
all critical systems back online. This covers, for example,
restore data from back-up or fix of a failure. In most cases
this part is carried out by system administrator, network
administrator, storage administrator etc.
Stage 4: Resume Production
Resume Production

Image Reference -
http://defaultreasoning.files.wordpress.com/2013/12/bcdr-04.png
At this stage all systems are recovered, integrity of the
system or data is verified and all critical systems can resume
normal operations. The Work Recovery Time (WRT) determines the
maximum tolerable amount of time that is needed to verify the
system and/or data integrity. This could be, for example,
checking the databases and logs, making sure the applications
or services are running and are available.
In most cases those tasks are performed by application
administrator, database administrator etc. When all systems
affected by the disaster are verified and/or recovered, the
environment is ready to resume the production again.
MTD

NEW QUESTION: 2
A large finance firm processes three times as many transactions in December of each year. The transactions are processed in a private cloud. Management wants to avoid adding permanent resources to accommodate the single month increase. Which of the following is the BEST way to meet the need?
A. Determine usage patterns for the seasonal capacity needs and add physical resources to allow additional processing.
B. Determine usage patterns over time and virtualize the processing traffic to give room for seasonal changes in resource demand.
C. Migrate all transaction processing to a public cloud and size capacity for the largest seasonal needs.
D. Keep current capacity for processing, but implement cloud bursting to auto scale the resources without having to invest in infrastructure.
Answer: D
