NEW QUESTION: 1
You are creating a SQL Server Analysis Services (SSAS) cube. You need to create a time dimension. It must be linked to a measure group named Sales at the day granularity level. It must also be linked to a measure group named Salary at the month granularity level.
What should you do?
A. Create a dimension with one attribute hierarchy. Set the IsAggregatable property to False and then set the DefaultMember property. Use a many-to-many relationship to link the dimension to the measure group.
B. Use the Business Intelligence Wizard to define dimension intelligence.
C. Create a dimension with one attribute hierarchy. Set the ValueColumn property, set the IsAggregatable property to False, and then set the DefaultMember property. Configure the cube dimension so that it does not have a relationship with the measure group. Add a calculated measure that uses the

MemberValue attribute property.
D. Use role playing dimensions.
E. Create a dimension with one attribute hierarchy. Set the IsAggregatable property to False and then set the DefaultMember property. Use a many-to-many relationship to link the dimension to the measure group.
F. Create a dimension. Create regular relationships between the cube dimension and the measure group. Configure the relationships to use different dimension attributes.
G. Add a calculated measure based on an expression that counts members filtered by the Exists and NonEmpty functions.
H. Add a hidden measure that uses the Sum aggregate function. Add a calculated measure aggregating the measure along the time dimension.
I. Create several dimensions. Add each dimension to the cube.
J. Create a dimension. Then add a cube dimension and link it several times to the measure group.
K. Create a dimension with one attribute hierarchy. Set the IsAggregatable property to False and then set the DefaultMember property. Use a regular relationship between the dimension and measure group.
L. Create a new named calculation in the data source view to calculate a rolling sum. Add a measure that uses the Max aggregate function based on the named calculation.
M. Add a measure that uses the Count aggregate function to an existing measure group.
N. Add a measure that uses the DistinctCount aggregate function to an existing measure group.
O. Add a measure group that has one measure that uses the DistinctCount aggregate function.
Answer: F

NEW QUESTION: 2
HOTSPOT
You are developing an ASP.NET MVC application.
Before an action is executed, information about the action must be written to a log. After results are returned, information about the results also must be written to the log.
You need to log the actions and results.
You have the following code:

Which code segments should you include in Target 1, Target 2 and Target 3 to implement the LogActionFilter class? (To answer, select the appropriate option from the drop-down list in the answer area.) Hot Area:

Answer:
Explanation:

Explanation/Reference:
Explanation:

Target 1: IActionFilter
MVC3 introduced a completely new pattern to configure filters for controllers and its actions. While injection of filter attributes is still supported itis recommended using this new pattern for filter configuration because it has the advantage to support constructor injection and does not require the InjectAttribute anymore.
First of all you have to create your filter class by implementing one of the filter interfaces e.g. IActionFilter.
Target 2: public void OnActionExecuting(ActionExecutingContext filterContext) Target 3: public void OnActionExecuted(ActionExecutedContext filterContext)
