NEW QUESTION: 1
For what reason would you configure multiple security contexts on the ASA firewall?
A. To provide redundancy and high availability within the organization.
B. To enable the use of VRFs on routers that are adjacently connected.
C. To enable the use of multicast routing and QoS through the firewall.
D. To separate different departments and business units.
Answer: D
Explanation:
Explanation
You can partition a single ASA into multiple virtual devices, known as security contexts. Each context is an independent device, with its own security policy, interfaces, and administrators. Multiple contexts are similar to having multiple standalone devices.
Common Uses for Security Contexts
+ You are a service provider and want to sell security services to many customers. By enabling multiple security contexts on the ASA, you can implement a cost-effective, space-saving solution that keeps all customer traffic separate and secure, and also eases configuration.
+ You are a large enterprise or a college campus and want to keep departments completely separate.
+ You are an enterprise that wants to provide distinct security policies to different departments.
+ You have any network that requires more than one ASA.

NEW QUESTION: 3
You have a server named Server1 that runs Windows Server 2016.
Server1 is a Hyper-V host that hosts a virtual machine named
VM1.
Server1 has three network adapter cards that are connected to
virtual switches named vSwitch1, vSwitch2 and vSwitch3.
You configure NIC Teaming on VM1 as shown in the exhibit.
(Click the Exhibit button.)

You need to ensure that VM1 will retain access to the network
if a physical network adapter card fails on Server1.
What should you do?
A. From Windows PowerShell on Server1, run the
Set-VmNetworkAdapter cmdlet.
B. From Hyper-V Manager on Server1, modify the properties of
vSwitch1.
C. From the properties of the NIC team on VM1, add the adapter
named Ethernet to the NIC team.
D. From Windows PowerShell on Server1, run the Set-VmSwitch
cmdlet.
Answer: A
Explanation:
Explanation/Reference:
Explanation:
We need to enable NIC teaming for the VM. This can either be
done in Hyper-V Manager or by running the following cmdlet.
Set-VMNetworkAdapter-AllowTeamingOn
