The software for preparing IBM Security Verify SaaS v1 Administrator exam comes with 90 days free updates **C1000-120 Reliable Test Tutorial** as well, Do not worry, if there is any update, we will send you email as soon as possible, or you can consult us through email or customer service.

We keep updating our IBM Security Verify SaaS v1 Administrator dumps according **C1000-120 Reliable Test Tutorial** to real exam, You will not find any muddling in IBM Security Verify SaaS v1 Administrator braindumps because these are verified by IBM Certifications, In the present competitive market, C1000-120 exam certification has been as a weapon to accelerate personal promotion.

We guarantee your success in the first attempt, If you do not pass the IBM C1000-120 exam (IBM Certification IBM Security Verify SaaS v1 Administrator) on your first attempt using our Stegschool testing engine, we will give you a FULL REFUND of your purchasing fee.

Our C1000-120 exam dump files will cope with your problem and give you a new learning experience.

NEW QUESTION: 1

DRAG DROP

You are the administrator of a SharePoint farm that is using a Distributed Cache service cluster.

You add memory to a server named CACHE1 in the Distributed Cache service cluster.

You need to increase the memory allocation of the Distributed Cache service on CACHE1 and avoid loss of cached data on the server.

Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.) Select and Place:

Answer:

Explanation:

Explanation/Reference:

Note:

* stop-SpDistributedCacheServiceInstance-Graceful

Stops an instance of the distributed cache service on a local server.

Use the Stop-SPDistributedCacheServiceInstancecmdlet to stop an instance of the distributed cache service on a local server.

Execution of this cmdlet moves cached items to another server to preserve them. If you stop the distributed service before you stop each instance, cached items are lost. To prevent cached items from being lost, use the Gracefulparameter.

* Set-CacheHostConfig

Updates the configuration settings for a Cache host to the specified values

* Change the memory allocation of the Distributed Cache

Use this procedure to reconfigure the memory allocation of the cache size of the Distributed Cache service.

Stop the Distributed Cache service on all cache hosts. To stop the Distributed Cache service, go to

Services on Server in Central Administration, and Stop the Distributed Cache service on all cache hosts in the farm. To reconfigure the cache size of the Distributed Cache service, run the following command one time

only on any cache host at the Windows PowerShell command prompt:

Update-SPDistributedCacheSize -CacheSizeInMBCacheSize

Where:

CacheSize is the cache size's memory allocation assignment in MB. In the previous example, the

cache size was calculated at 7000 MB for a server with 16 GB of total memory.

Restart the Distributed Cache service on all cache hosts. To restart the Distributed Cache service, go

to Services on Server in Central Administration, and Start the Distributed Cache service on all cache hosts in the farm.
