Are you on the way to pass the CAA exam, The main idea here is to help the candidate realize the way each and every CAA exam question should be answered during the exam.

NEW QUESTION: 1
Review the following requirement:
A PRPC-based stock trading application allows a pool of traders to initiate stocks sale on behalf of customers. However, such an operation should only be allowed during the Stock Market Trading Sessions. The requirement for the application is to detect any operations occurring outside of the Trading Sessions hours, to suspend it and alert a group of auditors to review it and decide whether to allow it to go through during the next session or to simply reject it.
Which of the following approaches is the most appropriate for this requirement? (Choose One)

A. Define a when condition rule to identify a trade being initiated outside trading sessions, a Declare OnChange rule to track such trade and suspend it, as well as a flow to review the work item and render a verdict on it

B. Build a Case Match rule with condition(s) to identify outside trading sessions trades. In a case match calling activity, loop through the retrieved cases and route them to a "Pending" workbasket. Then call a flow rule with an assignment to an auditor to review the case and make the appropriate decision

C. Setup the Auditors to be able to subscribe to business events. Configure a business event definition to monitor outside trading sessions trades. When the event occurs, have the business event defintion notify the subscribers and call a review flow. Have the Auditors subscribe to the event definition

D. Tag any trade work item which pyCreateDateTime doesn't fall within the session hours and route the work item into the "Pending" workbasket. Send out a RSS feed to the auditors indicating the work item ID so they can create an ad-hoc work on that work item to review it, allow it or reject it

Answer: A

NEW QUESTION: 2
You need to configure navigation for publishing sites. What should you do?
Case Study Title (Case Study):
Topic 3, Blue Yonder Airlines
Background
General Background You are the SharePoint administrator for Blue Yonder Airlines. The company currently has a SharePoint 2010 environment. It is your responsibility to install and configure a SharePoint 2013 environment that will be used for information management and collaboration, both internally and with external partners. You must also migrate the existing SharePoint environment to SharePoint 2013.
Blue Yonder works with several external partners, including those described in the following table.

Blue Yonder collaborates with Wingtip Toys and Tailspin Toys to design, manufacture, and sell airline-related toys to customers. The Blue Yonder board of directors expects the collaborative design process to become more effective as a result of implementing SharePoint 2013.
Technical Background
All existing servers run Windows Server 2008 R2. The network infrastructure contains an Active Directory Domain Services (AD DS) environment. The internal AD DS domain is named blueyonderairlines.com. User-specific contact information is stored and managed in AD DS. All employees are located in the ActiveUsers organizational unit (OU). Active Directory

Federation Services (AD FS) is deployed in the LAN. Two AD FS proxy servers are deployed in the perimeter network. Users log on to client computers by using the syntax

Blue Yonder provides access to the SharePoint environment to partners through individual URLs for each partner company. Each partner company has a dedicated web application and site collection. The following table describes the access URLs.

In preparation for the upgrade you maximize the default upload limits for each web application.
Blue Yonder has an existing managed metadata service containing managed metadata and content types. The content types have workflows. You create a new managed metadata service connection for the Wingtip Toys web application.
A workflow created by Blue Yonder moves information through the product lifecycle. Each access URL specifies a separate web application, site collection, and site.
Business Requirements
The SharePoint environment must meet the following business requirements:
-Provide an environment where toy design, manufacturing, and sales information can be shared between Blue Yonder and partner companies.
-Provide a training site for internal and external users.
-Allow content authors of training materials to upload documents, large image files, and large video files for consumption by internal and external users.
-Allow users to sort content by category.
-Ensure that users from Wingtip Toys or Tailspin Toys can access content only in their own areas of the portal.
-Prevent users from Wingtip Toys and Tailspin Toys from adding terms or creating enterprise keywords.
-Content types and keywords must be shared between sites, site collections, and web applications.
-Simplify search processes by collecting unique characteristics and information about each uploaded item.
-Allow administrators to promote search query results across the entire environment.
-Allow resource coordinators from Blue Yonder to find temporary staffing options from Margie's Travel contractors and employees.
-Provide opportunities for social interaction between employees, contractors, and external contacts to promote idea generation and socialization.
-Utilize site feeds on all collaborative sites.
-Replicate profile information in the https://blueyonderairlines.com site to partner sites.
-Ensure that third-party vendors can read and modify documents.
-For publishing sites, use only friendly URLs that do not contain anything other than the direct address. Avoid URL constructions such as /Lists/Posts/Post.aspx?ID = 568.

Site content must meet the following requirements:
Individual training videos must be in single files, and presented on the training site.
Changes to confidential documents must be logged.
Technical Requirements
You must meet the following technical requirements:
Store all large files outside of the SharePoint content database or databases.
-All servers must run on virtual machines.
-Ensure that search queries are handled by web servers.
-Ensure that all lists support multiple content types.
A. Configure alternate access mapping.
B. Create a managed path for the site collection.
C. Modify the site settings to use managed navigation.
D. Modify the site settings to use structural navigation.
Answer: C

NEW QUESTION: 3
