NEW QUESTION: 2

A 33-year-old client is diagnosed with bipolar disorder, acute phase. This is her first psychiatric hospitalization, and she is being evaluated for treatment with lithium. Which of the following diagnostic tests are essential prior to the initiation of lithium therapy with this client?

- A. Glucose, glucose tolerance test, and random blood sugar
- B. X-rays, electroencephalogram, and electrocardiogram(ECG)
- C. Blood urea nitrogen, electrolytes, and creatinine
- D. Hematocrit, hemoglobin, and white blood cell (WBC) count

Answer: C

Explanation:

Explanation

(A) These are general diagnostic blood studies (usually done on admission), but they are not reliable indicators of lithium therapy clearance. (B) These are the primary diagnostic tests to determine kidney functioning.

Because lithium is excreted through the kidneys and because it can be very toxic, adequate renal function must be ascertained before therapy begins. (C) These are diagnostic blood tests used to determine the presence of endocrine (not renal) dysfunction. (D) These are other types of diagnostic procedures used to determine musculoskeletal, neural, and cardiac (rather than renal) functioning.

Answer : A

Explanation:

A: is very work intensive, and requires editing for every user. While answer "B" apply the policy on the S3 token directly, using account-prefixes of users business unit.

D: even STS & Idp work together but all the users are already having AWS Accounts. Plus Token Vending Machine (TVM)

is complicated and does not have enough documentation in AWS.

NEW QUESTION: 4

A corporate cloud security policy states that communications between the company's VPC and KMS must travel entirely within the AWS network and not use public service endpoints. Which combination of the following actions MOST satisfies this requirement? (Choose two.)

- A. Add the `aws:sourceVpce` condition to the AWS KMS key policy referencing the company's VPC endpoint ID.
- B. Remove the VPC internet gateway from the VPC and add a virtual private gateway to the VPC to prevent direct, public internet connectivity.
- C. Create a VPC endpoint for AWS KMS with private DNS enabled.
- D. Use the KMS Import Key feature to securely transfer the AWS KMS key over a VPN.
- E. Add the following condition to the AWS KMS key policy:
`"aws:SourceIp": "10.0.0.0/16"`.

Answer: A,C

Explanation:

Explanation

An IAM policy can deny access to KMS except through your VPC endpoint with the following condition statement:

```
"Condition": {
  "StringNotEquals": {
    "aws:sourceVpce": "vpce-0295a3caf8414c94a"
  }
}
```

If you select the Enable Private DNS Name option, the standard AWS KMS DNS hostname (Error! Hyperlink reference not valid.) resolves to your VPC endpoint.
