**Answer: C,D,E**

**NEW QUESTION: 3**

Scenario: A Citrix Administrator gives permissions to team members to access their own admin partition. This will allow them to add resources for different departments and manage them without making changes to the default Citrix ADC partition and configuration.

One team member typing to use the command line interface (CLI) to troubleshoot an authentication issue could NOT use aaad.debug. However, the team member has full permissions on the admin partition.

What can be the cause of this issue?

- A. The team member is NOT using the CLI correctly.
- B. The team member does NOT have permission to use the CLI.
- C. The team member needs to troubleshoot the issue from the GUI.
- D. The team member does NOT have shell access by design.

**Answer: A**

**NEW QUESTION: 4**

You are maintaining a ASP.NET Core web application that uses Entity Framework Core for data access. The application contains a model class named Student.

You must add a field named FirstName to the class. The field has following requirements:

- \* Use a non-nullable field named FName to store data in a Microsoft SQL Server database.

- \* The data length must be between 2 and 50 characters.

The application user interface must display an error message if the maximum or minimum length requirements are not met.

You need to implement the FirstName field.

How should you complete the code? To answer, select the appropriate code segments to use in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation
