Explanation:

*New-CsHostingProvider Creates a new hosting provider for use in your organization. A hosting provider is a private third-party organization that provides instant messaging, presence, and related services for a domain that you would like to federate with. Hosting providers, such as Microsoft Lync Online 2010, differ from public providers (such as Yahoo!, MSN, and AOL) in that their services are not offered to the general public.

*New-CsAllowedDomain Adds a domain to the list of domains approved for federation. After a domain has been approved for federation (by being added to the allowed list), your users can exchange instant messages and presence information with people who have accounts in the federated domain.

From Scenario:

/ The Lync Server 2013 infrastructure is configured to use federation with users at a partner company, which is named Contoso, Ltd. Contoso has a SIP domain named contoso.com. The users at Contoso use Microsoft Lync Online.
