NEW QUESTION: 1
In access control terms, the word "dominate" refers to which of the following?
A. Valid need-to-know with read privileges
B. Higher or equal to access class
C. Rights are superceded
D. A higher clearance level than other users
Answer: B

Explanation:
Explanation/Reference:
Explanation:
Higher or equal to access class. The reason is the term dominates refers to a subject being authorized to perform an operation if the access class of the subject is higher or dominates the access class of the object requested. This is the best answer for the term "dominates" in access control. If a subject wishes to access an object, his security clearance must be equal or higher than the object he's accessing.
Incorrect Answers:
B: Rights are superceded is incorrect as it is not actually a valid condition.
C: Valid need-to-know with read privileges is too specific to be dominates, and is usually what a user's label indicates.
D: A higher clearance level than others. Although having a higher clearance level might be important to obtain access to the higher levels of data, it is not what the definition of "dominates" refers to in access control.

NEW QUESTION: 2
Which three statements about HSRP operation are true? (Choose three.)
A. The virtual IP address and virtual MA+K44C address are active on the HSRP Master router.
B. The HSRP virtual IP address must be on a different subnet than the routers' interfaces on the same LAN.
C. HSRP supports only clear-text authentication.
D. The HSRP default timers are a 3 second hello interval and a 10 second dead interval.
E. The HSRP virtual IP address must be the same as one of the router's interface addresses on the LAN.
F. HSRP supports up to 255 groups per interface, enabling an administrative form of load balancing.
Answer: A,D,F
Explanation:
The virtual MAC address of HSRP version 1 is 0000.0C07.ACxx, where xx is the HSRP group number in hexadecimal based on the respective interface. For example, HSRP group 10 uses the HSRP virtual MAC address of 0000.0C07.AC0A. HSRP version 2 uses a virtual MAC address of 0000.0C9F.FXXX (XXX: HSRP group in hexadecimal)
