Answer: D

NEW QUESTION: 2

A solutions architect plans to convert a company's monolithic web application into a multi-tier application. The company wants to avoid managing its own infrastructure. The minimum requirements for the web application are high availability scalability and regional low latency during peak hours. The solution should also store and retrieve data with millisecond latency using the application's API. Which solution meets these requirements?

- A.** Use an Amazon Route 53 routing policy with geolocation that points to an Amazon S3 bucket with static website hosting and Amazon DynamoDB as the data store
- B.** Use Amazon API Gateway with an edge-optimized API endpoint, AWS Lambda for compute and Amazon DynamoDB as the data store
- C.** Use an Amazon CloudFront distribution that points to an Elastic Load Balancer with an Amazon EC2 Auto Scaling group, along with Amazon RDS Multi-AZ DB instances
- D.** Use AWS Fargate to host the web application with backend Amazon RDS Multi-AZ DB instances

Answer: C

NEW QUESTION: 3

Which best describes how Session State Protection works?

- A.** adds checksums to Page Access Protection attributes and Session State Protection Item attributes to prevent alteration of session state
- B.** saves data in Oracle Application Express session state tables in encrypted form and uses the Page Access Protection attributes and the Session State Protection item attributes with checksums to prevent alteration of session state
- C.** encrypts the values supplied in the URL to prevent reading of the values
- D.** saves sensitive data in Oracle Application Express session state tables in encrypted form, stopping users from tampering with the data

Answer: B
