Answer: C, D

NEW QUESTION: 3

RT produces two products from different quantities of the same resources using a just-in-time (JIT) production system. The selling price and resource requirements of each of the products are shown below:

Market research shows that the maximum demand for products R and T during June 2010 is 500 units and 800 units respectively. This does not include an order that RT has agreed with a commercial customer for the supply of 250 units of R and 350 units of T at selling prices of \$100 and \$135 per unit respectively. Although the customer will accept part of the order, failure by RT to deliver the order in full by the end of June will cause RT to incur a \$10,000 financial penalty. At a recent meeting of the purchasing and production managers to discuss the production plans of RT for June, the following resource restrictions for June were identified: Direct labour hours 7,500 hours Material A 8,500 kgs Material B 3,000 litres Machine hours 7,500 hours Assuming that RT completes the order with the commercial customer, prepare calculations to show, from a financial perspective, the optimum production plan for June 2010 and the contribution that would result from adopting this plan.

The contribution per unit for R and T will be...?

A. R = \$47 per unit. T = \$61 per unit

B. R = \$45 per unit. T = \$66 per unit

C. R = \$47 per unit. T = \$65 per unit

D. R = \$51 per unit. T = \$61 per unit

Answer: A

NEW QUESTION: 4

Scenario:

CGE's security officer states that, for compliance reasons, all network traffic between Delivery Controllers, StoreFront servers, and NetScalers must be encrypted.

How should the architect recommend that IPsec be implemented?

- A. By implementing secure Delivery Groups
- B. By using NetScaler
- C. By implementing an Active Directory Group Policy
- D. By configuring a local IPsec policy in the master image

Answer: C
