Even if we come across much technology problems, we have never given up.

NEW QUESTION: 1
You configure a SharePoint Server 2010 Service Pack 1 (SP1) server farm. The farm contains a single Search service Application that has two index servers.
The search index contains 3 million documents that reside on the SharePoint farm and 2 million documents that reside on a network file server named fileserver1.
You need to ensure that users throughout the farm can specify that results for an individual search query should include content only from a network file share that has the

\\fileserver1\documents UNC path.
What should you do?
A. Add a second Search service Application and distribute the indexed content across the two index servers.
B. Add a new search scope at the site administration level. Add a scope rule that uses the Content Source rule type.
C. Add a new index partition and distribute the existing index across the two index servers.
D. Add a new federated search location. In the Restrictions and Credentials Information section, select the No restriction: All sites can use this location option.
E. Add a new crawl rule and specify the path where the rule will Apply. In the Crawl Configuration section, select the Include all items in this path option.
F. Add a new content source and specify its start address. Add a crawl schedule, and initiate a full crawl.
G. Add a new crawl rule and specify the path where the rule will Apply. In the Crawl Configuration section, select the Exclude all items in this path option.
H. Add a new search scope at the service Application level. Add a scope rule that uses the Web Address rule type.
Answer: B
