Answer: D
Explanation:
Explanation
The EIGRP Over the Top solution can be used to ensure
connectivity between disparate EIGRP sites. This feature uses
EIGRP on the control plane and Locator ID Separation Protocol
(LISP) encapsulation on the data plane to route traffic across
the underlying WAN architecture. EIGRP is used to distribute
routes between customer edge (CE) devices within the network,
and the traffic forwarded across the WAN architecture is LISP
encapsulated.
EIGRP OTP only uses LISP for the data plane, EIGRP is still
used for the control plane. Therefore we cannot say OTP uses
LISP encapsulation for dynamic multipoint tunneling as this
requires encapsulating both data and control plane traffic
-> Answer 'OTP uses LISP encapsulation for dynamic
multipoint tunneling' is not correct.
In OTP, EIGRP serves as the replacement for LISP control plane
protocols (therefore EIGRP will learn the next hop, not LISP
-> Answer 'LISP learns the next hop' is not correct).
Instead of doing dynamic EID-to-RLOC mappings in native
LISP-mapping services, EIGRP routers running OTP over a service
provider cloud create targeted sessions, use the IP addresses
provided by the service provider as RLOCs, and exchange routes
as EIDs. Let's take an example:

If R1 and R2 ran OTP to each other, R1 would learn about the
network 10.0.2.0/24 from R2 through EIGRP, treat the prefix
10.0.2.0/24 as an EID prefix, and take the advertising next hop
198.51.100.62 as the RLOC for this EID prefix. Similarly, R2
would learn from R1 about the network 10.0.1.0/24 through
EIGRP, treat the prefix 10.0.1.0/24 as an EID prefix, and take
the advertising next hop 192.0.2.31 as the RLOC for this EID
prefix. On both routers, this information would be used to
populate the LISP mapping tables. Whenever a packet from
10.0.1.0/24 to 10.0.2.0/24 would arrive at R1, it would use its
LISP mapping tables just like in ordinary LISP to discover that
the packet has to be LISP encapsulated and tunneled toward
198.51.100.62, and vice versa. The LISP data plane is reused in
OTP and does not change; however, the native LISP mapping and
resolving mechanisms are replaced by EIGRP.
