NEW QUESTION: 2
Refer to the exhibit.

Which statements accurately describe the status of the
Onboarded devices in the configuration for the network settings
shown? (Select two.)
A. They will connect to Employee_Secure SSID for provisioning
their devices.
B. They will connect to secure_emp SSID after provisioning.
C. They will perform 802.1X authentication when connecting to
the SSID.
D. They will use WPA2-PSK with AES when connecting to the SSID.
E. They will connect to Employee_Secure SSID after
provisioning.
Answer: B,C

NEW QUESTION: 3
Some of your Stakeholders reported to you that they are not
receiving status reports and other regular information on the
Portfolio progress. This has caused a big issue with the
governance board and they requested an immediate resolution.
You have already analyzed the stakeholders and prepared the
communication matrix; what is your best course of action in
this case?
A. Meet individually with each stakeholder and re-analyze their
needs and expectations
B. Update the Communication Management Plan
C. Update the communication matrix
D. Correctly configure the PMIS
Answer: D
Explanation:
Explanation
In this scenario, the portfolio manager has already done
stakeholder analysis and developed the communication matrix, in
addition, only some stakeholders are reporting this issue; so
the most probable scenario in this case is that the PMIS is not
correctly configured for those particular stakeholders. The
Portfolio manager should start by configuring the PMIS and then
explore other options

NEW QUESTION: 4
You are designing a data warehouse for a fresh food

distribution business that stores sates by individual product. It stores sales targets by product category. Products are classified into subcategories and categories.
Each product is included in only a single product subcategory, and each subcategory is included in only a single category.
The data warehouse will be a data source for an Analysis Services cube.
The data warehouse contains two fact tables:
- factSales, used to record daily sales by product
- factProductTarget, used to record the monthly sales targets by product category
Reports must be developed against the warehouse that reports product sales by product, category and subcategory, and product sales targets.
You need to design the product dimension. The solution should use as few tables as possible while supporting all the requirements.
What should you do?
A. Create three product tables, dimProduct, dimProductCategory, and dimProductSubcategory. Connect factSales to all three product tables and connect factProductTarget to dimProductCategory with foreign key constraints. Direct the cube developer to use key granularity attributes.
B. Create three product tables, dimProduct, dimProductCategory, and dimProductSubcategory, and a fourth bridge table that joins products to their appropriate category and subcategory table records with foreign key constraints. Direct the cube developer to use key granularity attributes.
C. Create two product tables, dimProduct and dimProductCategory. Connect factSales to dimProduct and factProductTarget to dimProductCategory with foreign key constraints. Direct the cube developer to use key granularity attributes.
D. Create one product table, dimProduct, which contains product detail, category, and subcategory columns. Connect factSales to dimProduct with a foreign key constraint. Direct the cube developer to use a non-key granularity attribute for factProductTarget.
Answer: D
