Answer:

Explanation:

References:

- <https://azure.microsoft.com/sv-se/blog/azure-security-center-can-identify-attacks-targeting-azure-app-service-applications/>
 - * External vendors must be able to perform custom analysis of data using machine learning technologies.
 - * You must display a dashboard on the operations status page that displays the following metrics: telemetry, volume, and processing latency.
 - * Traffic data must be made available to the Government Planning Department for the purpose of modeling changes to the highway system. The traffic data will be used in conjunction with other data such as information about events such as sporting events, weather conditions, and population statistics. External data used during the modeling is stored in on-premises SQL Server 2016 databases and CSV files stored in an Azure Data Lake Storage Gen2 storage account.
 - * Information about vehicles that have been detected as going over the speed limit during the last 30 minutes must be available to law enforcement officers. Several law enforcement organizations may respond to speeding vehicles.
 - * The solution must allow for searches of vehicle images by license plate to support law enforcement investigations. Searches must be able to be performed using a query language and must support fuzzy searches to compensate for license plate detection errors.
- Telemetry Capture
- The telemetry capture system records each time a vehicle passes in front of a sensor. The sensors run on a custom embedded operating system and record the following telemetry data:

- * Time
- * Location in latitude and longitude
- * Speed in kilometers per hour (kmph)
- * Length of vehicle in meters

Visual Monitoring

The visual monitoring system is a network of approximately 1,000 cameras placed near highways that capture images of vehicle traffic every 2 seconds. The cameras record high resolution images. Each image is approximately 3 MB in size. This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other question on this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next sections of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question on this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.

Overview

You develop data engineering solutions for Graphics Design Institute, a global media company with offices in New York City, Manchester, Singapore, and Melbourne.

The New York office hosts SQL Server databases that stores massive amounts of customer data. The company also stores millions of images on a physical server located in the New York office. More than 2 TB of image data is added each day. The images are transferred from customer devices to the server in New York.

Many images have been placed on this server in an unorganized manner, making it difficult for editors to search images.

Images should automatically have object and color tags generated. The tags must be stored in a document database, and be queried by SQL. You are hired to design a solution that can store, transform, and visualize customer data.

NEW QUESTION: 3

Mark is trying to position a FIELD_B relatively below FIELD_A. He is using the alignment tools but the option Relative Align Below is grayed out. What is the likely cause and how can Mark fix this?

- A. He has selected FIELD_A first and, while holding the SHIFT key, selected FIELD_B. He should select the fields in reverse order.
- B. FIELD_B currently is laid out above FIELD_A on the design canvas. Mark should drag the FIELD_B below FIELD_A first.
- C. There is already an absolute positioning for FIELD_B. Mark should remove this first before trying the relative alignment
- D. FIELD_A comes after FIELD_B in the build order. Mark should use the outline view to change the build order of the 2 fields and then redo the relative alignment

Answer: D

NEW QUESTION: 4

What are the EPEAT classifications for Green products?

- A. First Class, Second Class, Third Class.
- B. Green, Amber, Red.
- C. Premier, Advanced, Standard.
- D. Gold, Silver, Bronze.

Answer: D
