NEW QUESTION: 2

A solutions architect has implemented a SAML 2.0 federated identity solution with their company's on-premises identity provider (IdP) to authenticate users' access to the AWS environment. When the solutions architect tests authentication through the federated identity web portal, access to the AWS environment is granted. However, when test users attempt to authenticate through the federated identity web portal, they are not able to access the AWS environment.

Which items should the solutions architect check to ensure identity federation is properly configured? (Select THREE.)

A. The on-premises IdP's DNS hostname is reachable from the AWS environment VPCs.

B. The IAM roles created for the federated users' or federated groups' trust policy have set the SAML provider as the principal.

C. The web portal calls the AWS STS AssumeRoleWithSAML API with the ARN of the SAML provider, the ARN of the IAM role, and the SAML assertion from IdR

D. The IAM user's permissions policy has allowed the use of SAML federation for that user.

E. Test users are not in the AWSFederatedUsers group in the company's IdR

F. The company's IdP defines SAML assertions that properly map users or groups in the company to IAM roles with appropriate permissions.

A. Option D

B. Option A

C. Option E

D. Option B

E. Option C

Answer: C,D

Explanation:

An autoscaling solution reduces the amount of manual work involved in dynamically scaling an application. It can do this in two different ways: either preemptively by setting constraints on the number of role instances based on a timetable, or reactively by adjusting the number of role instances in response to some counter(s) or measurement(s) that you can collect from your application or from the Azure environment.
