NEW QUESTION: 1

For proper escalation of events, it is MOST important for the information security manager to ensure:

- A. the incident response plan is approved.
- B. incident severity levels are defined.
- C. incident documentation templates are created.
- D. the incident team is adequately staffed.

Answer: B

NEW QUESTION: 2

Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that runs Windows Server 2012 R2 and has the DHCP Server server role installed.

You need to create an IPv6 scope on Server1. The scope must use an address space that is reserved for private networks. The addresses must be routable.

Which IPV6 scope prefix should you use?

- A. FF00:123:4567:890A::
- B. 2001:123:4567:890A::

- C. FD00:123:4567::
- D. FE80:123:4567::

Answer: C

Explanation:

*A unique local address (ULA) is an IPv6 address in the block fc00::/7, defined in RFC

4193. It is the approximate IPv6 counterpart of the IPv4 private address.

The address block fc00::/7 is divided into two /8 groups:

/ The block fc00::/8 has not been defined yet.

/ The block fd00::/8 is defined for /48 prefixes, formed by setting the 40 least-significant bits of the prefix to a randomly generated bit string.

*Prefixes in the fd00::/8 range have similar properties as those of the IPv4 private address

ranges:

/ They are not allocated by an address registry and may be used in networks by anyone

without outside involvement.

/ They are not guaranteed to be globally unique.

/ Reverse Domain Name System (DNS) entries (under ip6.arpa) for fd00::/8 ULAs cannot

be delegated in the global DNS.

NEW QUESTION: 3

When using an IaaS solution, what is the capability provided to the customer?

A. To provision processing, storage, networks, and other fundamental computing resources when the consumer is not able to deploy and run arbitrary software, which can include OSs and applications.

B. To provision processing, storage, networks, and other fundamental computing resources when the auditor is able to deploy and run arbitrary software, which can include OSs and applications.

C. To provision processing, storage, networks, and other fundamental computing resources when the consumer is able to deploy and run arbitrary software, which can include OSs and applications.

D. To provision processing, storage, networks, and other fundamental computing resources when the provider is able to deploy and run arbitrary software, which can include OSs and applications.

Answer: C

Explanation:

According to "The NIST Definition of Cloud Computing," in IaaS, "the capability provided to the consumer is to provision processing, storage, networks, and other fundamental computing resources where the consumer is able to deploy and run arbitrary software, which can include operating systems and

applications. The consumer does not manage or control the underlying cloud infrastructure but has control over operating systems, storage, and deployed applications; and possibly limited control of select networking components (e.g., host firewalls).
