NEW QUESTION: 1

A service provider offers four classes of service for MPLS VPN customer with the following IPP/EXP values:

- i. voice = 5
- ii. video = 4
- iii. priority data = 3
- iv. best-effort data = 0

The service-provider also supports multicast VPN services in the priority data and best-effort classes.

Multicast VPN is implemented as a draft-rosen profile. On a P router, in the MPLS core, the ingress QoS policy-map must classify all incoming packets, so that different classes of traffic can be property handled in fabric queues and egress

queues. All types of packets in the core network must be covered.

Which ingress classification offers the optimal performance and provides the minimum number of actions that match the service provider QoS requirements?

NEW QUESTION: 3

- A. transparent mode
- B. Promiscuous mode
- C. inline-bypass mode
- D. inline mode

Answer: B

Explanation:

Explanation: The recommended IPS deployment mode depends on the goals and policies of the enterprise.

IPS inline mode is more secure because of its ability to stop malicious traffic in real-time, however it may impact traffic throughput if not properly designed or sized. Conversely, IPS promiscuous mode has less impact on traffic throughput but is less secure because there may be a delay in reacting to the malicious traffic.
