**Answer: E**

**NEW QUESTION: 2**

Refer to the exhibit.

A customer has been performing VLUN Migrations between identical pools and noticed the migration times have varied from minutes to hours. What would explain the variations in the rate of migration?

- A. Number of simultaneous migration sessions has been exceeded
- B. Random read misses exceeding 50%
- C. Quality of service for VLUN has been set to 5
- D. Write Pending exceeding 50%

**Answer: D**

**NEW QUESTION: 3**

You manage an Azure web app in standard service tier at the following address: contoso.azurewebsites.net Your company has a new domain for the site named www.contoso.com that must be accessible by secure socket layer(SSL) encryption.

You need to add a custom domain to the Azure web app and assign an SSL certificate.

Which three actions should you perform? Each correct answer presents part of the solution.

- A. Add www.contoso.com to the list of domain names as a custom domain.
- B. Add SSL binding for the www.contoso.com domain with the server Name indication (SNL)SSL option selected.
- C. Add SSL binding for the www.contosco.com domain with the IP-based SSL option selected.
- D. Create a CNAME record from www.contoso.com to contoso.azurewebsites.net.

**E.** Create a new file that will redirect the site to the new URL and upload it to the Azure Web site.

**Answer: C,D,E**

Explanation:

Explanation

Step 1: When adding a CNAME record, you must set the Host Name field to the sub-domain you wish to use.

For example, www. You must set the Address field to the .azurewebsites.net domain name of your Azure Website. For example, contoso.azurewebsites.net.

\* Step 2: Modify the service definition and configuration files. Your application must be configured to use the certificate, and an HTTPS endpoint must be added. As a result, the service definition and service configuration files need to be updated.

\* Step 3:

IP based SSL associates a certificate with a domain name by mapping the dedicated public IP address of the server to the domain name. This requires each domain name (contoso.com, fabricam.com, etc.) associated with your service to have a dedicated IP address. This is the traditional method of associating SSL certificates with a web server.
