NEW QUESTION: 2
You are designing a SQL Server Integration Services (SSIS)
solution. The solution will contain an SSIS project that
includes several SSIS packages. Each SSIS package will define
the same connection managers and variables.
You have the following requirements:
Ensure that the deployment model supports changing the content
of connection strings by using

parameters at execution time.
Ensure that the deployment model automatically starts from
calls to the catalog.start_execution stored

procedure in the SSISDB database.
Maximize performance at execution time.

Minimize development effort.

You need to design a solution that meets the requirements.
What should you do? (More than one answer choice may achieve
the goal. Select the BEST answer.)
A. Use a package deployment model. Save each SSIS package to a
file share that can be accessed from all environments.
B. Use a package deployment model. Use a SQL Server package
configuration with a common filter.
Change the contents of the SSIS Configurations table at
runtime.
C. Use a project deployment model. Modify connection manager
properties to use project parameters.
Ensure that the SSISDB database is created.
D. Use a project deployment model. Configure connections in an
XML configuration file referenced by an environment variable
that corresponds to the SQL Server environment of each SSIS
package.
