C. SPAN
D. traceroute
Answer: C
Explanation:
A source port, also called a monitored port, is a switched or
routed port that you monitor for network traffic analysis. In a
single local SPAN session or RSPAN source session, you can
monitor source port traffic, such as received (Rx), transmitted
(Tx), or bidirectional (both). The switch supports any number
of source ports (up to the maximum number of available ports on
the switch) and any number of source VLANs.
A source port has these characteristics:
It can be any port type, such as EtherChannel, Fast Ethernet,
Gigabit Ethernet, and so forth.
It can be monitored in multiple SPAN sessions.
It cannot be a destination port.
Each source port can be configured with a direction (ingress,
egress, or both) to monitor. For EtherChannel sources, the
monitored direction applies to all physical ports in the group.
Source ports can be in the same or different VLANs. For VLAN
SPAN sources, all active ports in the source VLAN are included
as source ports.
