Different selects will have different acquisition, Our OmniStudio-Developer exam questions is specially designed for you to pass the OmniStudio-Developer exam, We have a dedicated all-day online service to help you solve problems.

The feedback of our customers is enough to legitimize our claims on our OmniStudio-Developer exam questions, Select ITCertMaster is equivalent to choose a success, And you will know the quality of our OmniStudio-Developer study prep as well.

Just make sure that you study the Questions and Answers **Exam OmniStudio-Developer Passing Score** product of respective Exam for two weeks before you appear in actual Exam, You spend lotsof time on these reviewing materials you don't know **Exam OmniStudio-Developer Passing Score** whether it is useful to you, rather than experiencing the service Stegschool provides for you.

The reasons you choose our Stegschool, We aim to deliver value for money and hence invite you to try our OmniStudio-Developer Exam products before buying it, Passing a certification **Exam OmniStudio-Developer Passing Score** exam means opening up a new and fascination phase of your professional career.

#### **NEW QUESTION: 1**

You are designing a Data Protection Advisor (DPA) solution to support a NAS environment. The environment consists of a Celerra, a NetApp file server, a backup infrastructure of 185 NetWorker clients, and 300 Symantec NetBackup clients.

What are the appropriate DPA licensing requirements?

- A. Backup option for 500 clients and a single file server option for the NAS systems
- B. Backup option for 185 NetWorker and 300 NetBackup clients, and 1 Celerra, and 1 NetApp client
- C. Backup option for required client count, a Celerra file server, and a NetApp file server option
- D. Backup option for 500 clients and one file server option for each NAS system

**Answer: D**

**NEW QUESTION: 2**

Which file is used by ld.so to find libraries quickly without actually having to search the directories in its library path?

- A. /var/.cache
- B. /etc/ld.so.cache
- C. /etc/ld.so
- D. /var/ld/cache
- E. /etc/ld.so.conf

**Answer: B**

**NEW QUESTION: 3**

After executing a terraform apply, you notice that a resource has a tilde (~) next to it. What does this infer?

- A. Terraform can't determine how to proceed due to a problem with the state file.
- B. The resource will be created.
- C. The resource will be destroyed and recreated.
- D. The resource will be updated in place.

**Answer: D**

Explanation:

Explanation

The prefix -/+ means that Terraform will destroy and recreate the resource, rather than updating it in-place.

The prefix ~ means that some attributes and resources can be updated in-place.

```
$ terraform apply
```

```
aws_instance.example: Refreshing state...
```

```
[id=i-0bbf06244e44211d1]
```

An execution plan has been generated and is shown below.

Resource actions are indicated with the following symbols:

-/+ destroy and then create replacement

Terraform will perform the following actions:

```
# aws_instance.example must be replaced
```

```
-/+ resource "aws_instance" "example" {
```

```
~ ami = "ami-2757f631" -> "ami-b374d5a5" # forces
```

```
replacement
```

```
~ arn =
```

```
"arn:aws:ec2:us-east-1:130490850807:instance/i-0bbf06244e44211d
```
