about PEGAPCSA85V1 exam that we are the best.

NEW QUESTION: 1
You are asked to complete a 2-node installation of a FAS8060
cluster running clustered Data ONTAP 8.3.
The hardware has been installed and the cluster has been
configured. AutoSupport testing has not been
successful because NetApp Support cannot see any messages, and
the customer does not have any
messages in their inbox.
Which two actions should be performed to test the functionality
from the NetApp cluster? (Choose two.)
A. Verify that the domain controller responds to a ping
request.
B. Verify that the network gateway responds to a ping request.
C. Verify that the mailhost responds to a ping request.
D. Verify that the cluster interconnect switches respond to a
ping request.
Answer: C,D
Explanation:
Explanation/Reference:
B: Check that the mail host specified in the options is a host
that the storage system can talk to, by running
the following command on the storage system:
ping mailhost_name
mailhost_name is the name of the mail host specified in the
AutoSupport options.
D: If the system cannot deliver AutoSupport messages over SMTP
you should confirm basic network
connectivity and DNS lookup:
Your network management LIF must be up for operational and
administrative status.
You must be able to ping a functioning host on the same subnet
from the cluster management LIF (not a
LIF on any of the nodes).
You must be able to ping a functioning host outside the subnet
from the cluster management LIF.
You must be able to ping a functioning host outside the subnet
from the cluster management LIF using the
name of the host (not the IP address).
