**NEW QUESTION: 2**

You write a Web application. This application must support multiple languages.

You store the localized strings in the application as resources.

You want these resources to be accessed according to a user's language preference.

You create the following resource files in the App\_GlobalResources folder of your application.

myStrings.resx myStrings.en-CA.resx myString.en-US.resx  
myStrings.fr-CA.resx myStrings.es-MX.resx

Each resource file stores a localized version of the following strings: Name, E-mail, Address, and Phone.

You create a Web Form that contains one label for each of these strings.

You need to ensure that the correct localized version of each string is displayed in each label, according to a user's language preference.

What should you do?

**A.** Add the following code segment to the page's load event.

```
lblName.Text = @"{myStrings}Name"; lblAddress.Text =  
@"{myStrings}Address"; lblEmail.Text = @"{myStrings}Email";  
lblPhone.Text = @"{myStrings}Phone";
```

**B.** Add the following configuration section to the Web.config file. `<globalization culture="Auto" />`

**C.** Add the following code segment to the page's load event.

```
lblName.Text = Resources.myStrings.Name; lblAddress.Text =

**NEW QUESTION: 4**

Your company network includes Microsoft Visual Studio Team Foundation Server (TFS) 2012 and Microsoft System Center 2012. You need to monitor your company's application infrastructure. What should you configure?

- A. IntelliSense collector
- B. Application Controller
- C. Configuration Manager
- D. Event Log data collector
- E. Operations Manager

**Answer: E**

Explanation:

Operations Manager is a component of Microsoft System Center 2012 that helps the organization monitor services, devices, and operations for multiple computers from a single console. This guide leads the reader through the process of planning the Operations Manager infrastructure by addressing the following fundamental decisions and tasks:

- ullet Identifying which services, applications, and infrastructure need to be monitored.

- ullet Determining the resources needed to employ Operations Manager to monitor the selected resources.

- ullet Designing the components, layout, security, and connectivity of the Operations Manager infrastructure.

See "Microsoft System Center 2012 - Operations Manager Guide" <http://technet.microsoft.com/en-us/library/cc507089.aspx>

Configuration Manager provides key management capabilities around application delivery, desktop virtualization, device management, and security that make it possible to enable productivity amidst device proliferation - while also reducing costs.

Application Controller provides a unified console that helps you manage public clouds and private clouds, as well as cloud-based virtual machines and services.

There is no such thing as IntelliSense collector.
